

CHARULATA CHAUHAN

Targeting AI Agent Engineer, Applied AI, and Enterprise Automation roles

✉ charulata1711@gmail.com ☎ +6587636827 🌐 [LinkedIn](#) ● Singapore

■ EXECUTIVE SUMMARY

Enterprise Business Analytics M.Tech candidate (NUS-ISS) with hands-on experience building **AI agents, MCP-based tools, automated evaluation systems, and enterprise decision-support applications**. Developed practical AI solutions using **Python, prompt engineering, tool design, SAP BTP, Streamlit, React, Node.js, and REST APIs**. Built systems across **agent workflows, predictive modelling, NLP, model evaluation, workflow automation, and rapid prototyping**, translating complex business processes into reliable, explainable, and human-reviewable AI products.

● SKILLS

- **Agentic AI & GenAI** — MCP Servers · AI Tool Design · Prompt Engineering · Agent Workflows · Automated Evaluation · RAG Fundamentals
- **Programming & Prototyping** — Python · JavaScript · React · Node.js · Streamlit · REST APIs · Java · C++
- **Backend & Data Systems** — SQL · MongoDB · API Integration · Data Pipelines · Microservices Fundamentals · Model Monitoring
- **AI / ML & NLP** — scikit-learn · BERT · RoBERTa · BiLSTM · Forecasting · Classification · Model Evaluation
- **Enterprise Systems** — SAP BTP · OAuth2 · XSUAA · BTP Destinations · Power Automate · SharePoint · SAP Governance Workflows

■ WORK EXPERIENCE

Kuok Group

03/2026 - Present | Singapore

AI & Automation Intern

- Designed and built **AI-enabled decision-support and workflow systems** for SAP-related enterprise operations, combining predictive analytics, business rules, explainability, and human review.
- Developed and deployed an **MCP (Model Context Protocol) server on SAP BTP**, converting enterprise API requests into reusable AI tools through OAuth2, XSUAA, BTP Destinations, Cloud Foundry, and a Claude-compatible /mcp endpoint.
- Built a governed **Safety Stock and Reorder Point decision-support POC** using SAP production extracts in Excel, CSV, and Parquet; evaluated 29 DC01 materials across 6 frozen scenarios and retained 174 material-scenario evidence records.
- Created a read-only **Streamlit evidence explorer and automated evaluation process** with 36/36 reconciliation checks and 17/17 UI, serialization, server, and health checks.
- Translated analytical results into **5 ROBUST, 10 CONDITIONALLY ROBUST, and 14 FAILURE_RISK classifications**, routing 24 materials for business review while preventing automatic SAP writeback.
- Engineered a **Power Automate and SharePoint SAP Change Request workflow** with dynamic routing, multi-stage approvals, exception handling, notifications, and auditable state tracking.

DataVerze Analytics Pvt. Ltd.

07/2024 - 05/2025 | Pune, India

AI & Data Analyst

- Built **automated data-quality and monitoring pipelines** processing 50,000+ records, supporting reliable AI/ML inputs and operational pipeline stability.
- Designed **SQL-based KPI and anomaly-monitoring systems** for trend analysis, automated reporting, and early identification of data or model issues.
- Conducted **root-cause analysis on prediction errors and data inconsistencies**, improving downstream model reliability and evaluation quality.
- Built repeatable **baseline-vs-updated model evaluation workflows** using structured metrics, test cases, error analysis, and decision-ready summaries.
- Collaborated with analysts and engineers to translate business questions into validated analytical outputs and reusable monitoring logic.

Deepfleet Pvt. Ltd.

01/2024 - 06/2024 | Bengaluru, India

Software Developer Intern

- Developed **MERN-stack application components and rapid prototypes** using React, Node.js, MongoDB, and REST APIs.
- Automated **data extraction and reporting workflows using Python**, reducing manual operational effort by **30%**.
- Built KPI dashboards and analytical monitoring views for operational performance tracking and business decision support.

▲ EDUCATION

National University of Singapore, Singapore

08/2025 - Present | Singapore

M.Tech in Enterprise Business Analytics

Graduate Certificates

Enterprise Analytics & Decision Support Financial and operational analysis · Forecasting support · KPI design · Decision-support systems · Business interpretation

Analytics Project Management End-to-end project scoping · Stakeholder alignment · Evaluation frameworks · Data governance · Executive dashboards

Business Analytics Practice Descriptive and predictive analytics · Python-based modelling · Insight generation · Data validation · Decision communication

Customer Analytics Segmentation · Churn prediction · Customer lifetime value · Attribution modelling · Prescriptive recommendations

Predictive Modelling & Forecasting Regression and time-series models · Demand forecasting · Error analysis · Model validation · Python/R

Narsee Monjee Institute of Management Studies (NMIMS), MPSTME

07/2020 - 08/2024 | India

B.Tech in Information Technology

GPA - 3.61/4.0

■ PROJECTS - NUS MTECH IN ENTERPRISE BUSINESS ANALYTICS

Customer Analytics — AI Prescriptive Decision System

01/2026 - 03/2026

NUS-ISS M.Tech

- Engineered AI-ready datasets from **GA4 event-level customer interaction data**, transforming clickstream, engagement, conversion, and behavioral signals into structured features.
- Built **customer lifecycle intelligence models** using **PCA, K-Means, RFM, Random Forest churn prediction, Logistic Regression, and CLV proxy modelling**.
- Developed **Markov Chain attribution models** to quantify multi-touch contribution and support evidence-based marketing budget allocation.
- Designed a **prescriptive recommendation engine** that combined model outputs into prioritized retention, campaign, and customer-value actions.

Predictive Modelling & Demand Forecasting

NUS-ISS / Forecasting Project

- Built predictive solutions using the **OLIST Brazilian e-commerce dataset with 100,000+ orders** for demand forecasting, logistics analysis, and operational decision support.
- Applied **regression, classification, forecasting, clustering, and queueing models** to analyze demand patterns, fulfilment behaviour, and capacity scenarios.
- Created repeatable **model-validation and error-analysis workflows** using predictive and business performance metrics to compare alternatives.
- Translated technical outputs into explainable inventory, customer, and logistics recommendations for non-technical decision-makers.

Aspect-Based Sentiment Analysis (ABSA) – NLP & Model Evaluation Project

01/2024 - 06/2024

B.Tech Research

- Built an **Aspect-Based Sentiment Analysis system** to classify restaurant feedback across food quality, service, ambience, pricing, and overall experience.
- Implemented and compared **BERT, RoBERTa, and BiLSTM models** for fine-grained aspect-level sentiment classification.
- Achieved approximately **85% classification accuracy** using precision, recall, F1-score, confusion matrices, and systematic error review.
- Converted unstructured reviews into explainable customer insights and published related research work through IEEE.

● POSITIONS OF RESPONSIBILITY

PR Team Member

08/2021 - 05/2023

- Supported PR and outreach for GDSC events by creating promotional assets and coordinating communications across student channels.
- Partnered with cross-functional teams to drive awareness and participation in developer-community initiatives and workshops.

PR Head

07/2021 - 05/2023

- Led a 12-member PR and creative team to deliver marketing collateral, presentations, and event communication for technical initiatives.
- Planned and hosted a 200-student app-development seminar, managing content, promotion, stakeholder coordination, and on-ground execution.
- Collaborated with technical and leadership teams to improve event turnout and engagement through structured campaign planning.
